EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Kurt Pankratz on February 15, 2005.

The application has been amended as follows:

The abstract is amended as shown in the attached sheet wherein the reference numbers are removed.

REASONS FOR ALLOWANCE

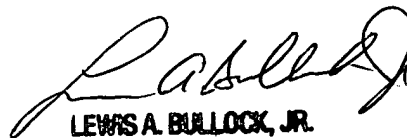

1. The following is an examiner's statement of reasons for allowance: The cited claims detail the function definitions implement a function that varies in dependence on control input and as part of the preparing of the project definition for each function portion including respective control information for use as the control input wherein the function blurs an image, expands an image, or performs at least one mathematical computation using the image data and wherein the control information selects between a plurality of blurring techniques, a plurality of colors to fill resulting added area, or between a plurality of mathematical equations. None of the prior art of record, Notani in particular, disclose the cited functions or their operation in the workflow definition as disclosed and therefore the cited claims are allowable over the prior art of record.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lewis A. Bullock, Jr. whose telephone number is (571) 272-3759. The examiner can normally be reached on Monday-Friday, 8:30 am - 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Meng An can be reached on (571) 272-3756. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

METHOD AND APPARATUS FOR SAVING A DEFINITION FOR AUTOMATED DATA PROCESSING

ABSTARCT OF THE DISCLOSURE

A number of items of data are obtained from a data source and are processed and then stored in a data destination. The data items may each include image data, text data, numeric data or some other type of data, or a combination of these different types of data. The processing of the data is controlled by a project definition which includes several modules selected from a variety of available modules. The modules have input and output ports that are interrelated by binding information. Each project definition is expressed in a public communication protocol, one example of which is the extensible Markup Language (XML) protocol.
